

Microsoft Copilot

Leverage the Power of AI in Your Microsoft Ecosystem

Microsoft 365 Copilot is a powerful AI-powered tool designed to revolutionize the way businesses operate – it seamlessly integrates with Microsoft 365 apps and internal data to enhance creativity, productivity and skill development.

Copilot offers real-time assistance during virtual meetings and simplifies various tasks such as document drafting and process automation while empowering individuals and organizations to harness valuable data for improved collaboration. Copilot improves efficiencies and reshapes how companies work, helping people connect with the core of their work and find purpose in their tasks. It can also save time, improve quality and boost productivity across an entire team. For security and privacy, Copilot maintains a strong commitment to data protection within the Microsoft 365 compliance boundary while not using customer data for foundational training.

RealFoundations will help your organization prepare for adopting Copilot with a focus on the following components:

- **Microsoft 365 Apps and Entra ID Deployment:** Integrate Copilot into the core Microsoft 365 productivity suite, such as Teams, New Outlook, Excel, Word, OneDrive, Loop and PowerPoint with Entra ID for digital identity management. Copilot ensures proper deployment and application management of these tools.
- **Proper Microsoft 365 Licensing:** Optimize your Microsoft licensing to ensure that your business is at the proper subscription level for Copilot while minimizing costs.
- **Data Security:** Implement data hygiene processes, through Microsoft Purview, into your organization which will organize, tag, and archive information to ensure relevant knowledge is presented through Copilot to the proper members of your company.
- **Microsoft Security Tools, Processes and Governance:** Enforce proper permission, data access, and sensitivity restrictions for the users and groups in your organization with systems like Microsoft Defender, Entra ID and Microsoft Purview. Copilot will enforce data boundaries to ensure only information your users have access to is presented.
- **End User Training, Adoption, and Support:** Set expectations and prepare your staff on how to maximize their utilization of Copilot. Develop focused Copilot education materials, live employee training and ongoing support to ensure continued success with the tool.

RealFoundations Qualifications

RealFoundations has attained recognition as a Microsoft Gold Partner and we remain committed to expanding our knowledge and growing our capabilities to help clients better understand, design, build, deploy and adopt Microsoft’s rapidly evolving modern digital workplace. RealFoundations is distinguished with the following Microsoft Gold competencies and individual certifications which recognize our ability to deliver, or help clients deliver, as detailed.

Our Microsoft Partner Competencies		Our Individual Certifications
Cloud Productivity	Design, build, deploy, adopt, and manage the Microsoft 365 ecosystem.	
Project & Portfolio Management	Deliver enterprise project management solutions for customers in Azure or Microsoft 365.	
Communications	Implement unified communications strategies for customers in Microsoft 365.	
Application Development	Design, develop, and monitor cloud and web-based applications in Azure or Microsoft 365.	
Cloud Platform	Address growing demand for infrastructure and SaaS solutions built on Azure.	
Data Center	Transform data centers into more flexible, scalable, and cost-effective solutions built on Azure.
